

Topeka IT Portal Project State

The Topeka IT Portal is a role-based operations application for division workers, supervisors, IT staff, and central administrators. It brings requests, printer health, device assignments, lockers, loaners, user access, and selected serial-gateway readings into one controlled portal.

4 workspaces

Worker, Supervisor, Admin, and Super Admin views.

Live ops focus

Queues, health, assignments, and exceptions are front and center.

Division-ready

Each division has its own operating data and settings.

Review ready

Best next step is a guided walkthrough with sample real data.

Current state: the application has implemented user-facing workflows for request tracking, printer monitoring, asset management, locker and loaner handling, admin reporting, and Lantronix device polling. This handout describes the application as of May 14, 2026 from the current project files.

Who Uses It

Role-based navigation and access

AUDIENCE	MAIN WORKSPACE	WHAT THEY CAN DO
Workers	My tools	Create requests, track their own tickets, and check printer status before reporting an issue.
Supervisors	Supervisor workspace	Look up employees, review crew requests, manage locker visibility, inspect assets, issue loaners, and watch devices needing attention.
Admin	Operations	Run the control room, work the ticket queue, maintain printers, manage users, inspect assets, configure access, and run approved printer telnet commands.
Super Admin	Administration	Create and enter divisions, run cross-division printer reports, update division settings, review Lantronix devices, and support division printer command sessions.

Access Model

IN PLACE

Permissions are grouped by work area: workspaces, tickets, printers, assets, lockers, users, and admin/system tools.

- Users inherit defaults from their role level.
- Specific permissions can be allowed or denied per user.
- Navigation only shows tools a user can access.

Division Model

IN PLACE

The app separates central administration from division work so each division can keep its own users, assets, printers, tickets, and settings.

- Super Admins can enter a division from the Admin area.
- Division settings include printer password code and ZIP fields.
- Cross-division reporting stays in the Admin workspace.

Core Application Features

Current user-facing capability

Ticket and Request Management

ACTIVE

Workers and managers can submit requests. IT gets a queue designed for daily work, not just viewing records.

- Ticket filters for Open, In progress, On hold, Resolved, and All.
- Priority is visible in the list and urgent/high items are emphasized.
- Tickets can be assigned, moved through statuses, and closed with resolution notes.
- Tickets can be linked to a printer or asset.
- Repair and RMA asset statuses can automatically create IT tickets.

Main views: IT Ticket Queue, Worker My Requests, Supervisor Requests

Asset Management

ACTIVE

The asset console tracks devices by category, assignment, status, and health.

- Categories include SAE devices, TC77 PODs, scanners, and batteries.
- Batteries are quantity-aware instead of serial-only.
- Assets can be searched by tag, serial number, IMEI, model, or holder.
- Scanning support can match tags, serials, IMEIs, and IDs.
- Status and issue flags support attention views for repair, RMA, missing, hold, and investigation states.

Main views: Asset Console, Asset Detail, Add Asset

Printer Operations

ACTIVE

Printer pages are health-first, with attention on down printers, warnings, latency, and current alerts.

- Workers and managers can view printer status and report a printer issue.
- Admin users can add, edit, and remove printers when permitted.
- Printer models are catalog-backed, with T8000 as the default model.
- Auto setup supports test-first bulk discovery and run-all configuration.
- Approved PrintNet telnet commands are searchable from a protected Ctrl-` palette.
- Printer error logs keep friendly messages plus raw detail when needed.

Main views: Printer Status, Printer Admin, Printer Detail

User and Access Management

ACTIVE

User management covers account basics plus operational fields needed by supervisors and IT.

- Accounts track name, username, position, division, locker number, audit status, and last active time.
- Admins can reset passwords when allowed and first-login password changes can be required.
- Role tiers control default access.
- The access catalog is organized by category and tier, with per-user permission overrides.

Main views: Users, Workers, Access Catalog

Supervisor and IT Workspaces

Daily operating screens

Supervisor Home

A shift workspace for employee lookup, gear handoff, printer issues, and crew requests.

- Employee search by name.
- Locker number, combo reveal, assigned device, and device status.
- Action buttons for lockers, loaners, assets, printers, requests, and new request creation.

Locker Console

A visual locker board for floor lockers and control center lockers.

- Floor lockers 1-90 and control center lockers 110-115.
- Open, assigned, and attention states at a glance.
- Locker detail shows employee, combo access, lock serial, assigned device, notes, and audit checkbox.

Loaner Console

Tracks the spare pool and active sign-outs.

- Active loans show borrower, device, reason, duration, date loaned, and overdue status.
- Spare pool shows available and loaned units.
- Managers can issue a spare or mark one returned when permitted.

Devices Needing Attention

Supervisor home highlights devices in RMA, missing, repair, investigation, or holding states.

- Shows the device, model, holder, status, and how long the device has been in that state.
- Provides a quick path to issue a spare when the user has permission.
- Links back to the full asset console for deeper review.

IT Control Room

Admins get a high-signal operations dashboard across tickets, printers, assets, and recent activity.

- Scope controls for 1 hour, 24 hours, 7 days, and 30 days.
- Open ticket count, urgent/high priority counts, printer attention, assets out, and average close time.
- Printer fleet heatmap, top-of-queue list, and recent activity feed.

Admin Reports

The Admin area includes a Reports tab that currently focuses on printer errors across divisions.

- Report selector with division filter.
- All Printer Errors report groups events by alert type.
- Expanded groups show recent occurrences, division, department, raw message, and a View action.
- View action can enter the correct division and open the printer detail page.

Division Administration

Central admins can create and manage division records used by the portal.

- Division list with code and ZIP fields used by printer setup.
- Save action for division settings when permitted.
- Enter action for switching into a division workspace.

Lantronix Device Monitoring

The portal can show configured Lantronix serial gateways and poll fuel inventory readings.

- Device list with endpoint, division, and reporting status.
- Current metrics for volume, height, water, and temperature.
- Tank volume chart for the last 30 days when enough samples exist.
- Recent poll history with success/failure status and raw response when available.

Background Monitoring

Background services support the operational views.

- Printer health is checked on a recurring cadence.
- Ping history powers printer latency and trend displays.
- SNMP trap and printer log ingestion support alert and error views.
- Retention cleanup trims older printer events, ping samples, and Lantronix samples while preserving active alert state.
- Health endpoints at /health/live and /health/ready support basic operational checks.
- Lantronix polling stores samples for charts and recent readings.

Current Review Checklist

Good non-technical demo path

● **Ready to walk through**

Role-specific navigation, ticket creation and queue work, printer status, asset search, manager lookup, locker views, loaner handling, and admin reports are all represented in the current app.

● **Best demo sequence**

Sign in with a provided account, open the role home page, create a request, review the IT queue, check printer health, search an employee, inspect a device, open the locker board, and review the Admin printer-error report.

● **Needs live-data confirmation**

Before broad rollout, verify real division users, real printer alert behavior, real asset records, role permissions, Lantronix device readings, printer telnet command behavior, and final server configuration with production-like data.

● **Presentation guidance**

For non-technical users, focus the walkthrough on what each role can do, what information appears automatically, and what actions reduce manual spreadsheet or manual follow-up work.

What To Emphasize

For workers	Simple request tracking and printer visibility.
For supervisors	Faster lookup, locker, device, and loaner decisions.
For IT	One place to see queue, printer, asset, and activity state.
For admins	Division oversight and cross-division printer error reporting.
